SHEEP AND GOATS

CMV: CUSTOM-MADE VACCINES

IMPROVING HEALTH, REDUCING ANTIBIOTIC TREATMENTS

Vaccinations are essential for professional sheep-keeping since they maintain and enrich the health status of the animals.

Custom-made vaccines are specific options to help prevent diseases in small ruminants and can be an excellent complement to licensed products. Using custom-made vaccines is an effective solution when no commercially licensed product is available for a specific pathogen strain or serotype and are a favourable alternative to using antibiotics.

Custom-made vaccines stimulate animals to form an effective immune protection.

Herd conditions may change constantly because a number of pathogens are able to mutate and change their properties, thereby quickly escaping the prophylactic scope of existing vaccines. Custom-made vaccine concepts offer the possibility to quickly react to these changes by using most actual isolates from the target farm starting with the next batch.

PRODUCTION PROCESS

1 Viral and bacterial pathogens weaken the animal.

2 Identification of the pathogen from tissue or sampling of the infected animal.

3 Production of a herd-specific vaccine.

4 Treatment with herd-specific vaccine.

5 After treatment the animal forms antibodies against the pathogen.

6 Vaccine reduces morbidity from field infection.

DIAGNOSTICS AND CUSTOM-MADE VACCINES FROM A SINGLE SOURCE

The SAN Group Biotech Germany campus features a new plant for custom-made vaccines, unique in the EU.

Targeted sampling in pathology

Production of viral, bacterial and mycoplasma vaccines

State-of-the-art technology for vaccine production
